INGLESE (leggere e tradurre)

1. Disaster recovery (DR) is an organization's ability to respond to and recover from an event that negatively affects business operations. The goal of DR is to reduce downtime, data loss and operational disruptions while maintaining business continuity. To prepare for this, organizations often perform an in-depth analysis of their systems. (**ESTRATTA**).
2. Cyber security is the practice of defending computers, servers, mobile devices, electronic systems, networks, and data from malicious attacks. It's also known as information technology security or electronic information security. The term "cybersecurity" applies in a variety of contexts, from business to mobile computing.
3. A data center is a physical location that stores computing machines and their related hardware equipment. It contains the computing infrastructure that IT systems require, such as servers, data storage drives, and network equipment. It is the physical facility that stores any company's digital data.
